## PROJECTS

Fertilizer Recommendation System For Disease Prediction (09/2023 - 12/2023)

- This Fertilizer Recommendation System is seamlessly integrated with Disease Prediction for efficient crop management. Employing sophisticated machine learning algorithms, the system adeptly analyzes agricultural data to deliver precise fertilizer recommendations customized to the unique needs of each crop and enhances their overall quality. 📄

Damaged Car Detection using Multiple Convolutional neural networks with Flask Web app (09/2023 - Present)

- This project aimed to identify and classify damages on cars by processing image data. The multiple CNNs employed in the solution allowed for robust and accurate detection of various types of damage. The integration with a user-friendly Flask Web App provided an accessible interface for users to upload car images and receive real-time analysis results.
